Prodige

Buffet Crampon Group is extending its line of student wind instruments with the launch of its first B&S PRODIGE trumpet.

Beginning trumpet players as well as experienced amateurs can now experience for themselves the acoustic world of a professional trumpet on a smaller budget. Great tone, ergonomics, reliability and ease of play are the essential qualities of this PRODIGE trumpet.

This trumpet has the option of two lead pipes - standard and reversed - which have been specially designed to facilitate air flow. Particular attention has been paid to pitch accuracy. The standard lead pipe is characterised by a very high degree of precision while the reversed leadpipe creates more openness of sound.

Both models will allow all musicians to express themselves more and more freely as they progress, all the while maintaining a remarkable ease of play.

From conception to manufacturing, the B&S Prodige trumpet is the result of the synergy of the skills present within the Buffet Crampon Group: Research and Development in our German workshops, manufacture of specialised production tools in France and finally assembly and finishing in our Beijing factory in China (Buffet Crampon Wind) which already makes the other Prodige brass instruments. Strict quality controls have been put in place both at the various production stations and after assembly. In addition to the final check at the factory, each trumpet will be checked again by one of our professional technicians based in our distribution subsidiaries (France, Germany, Japan, USA).

The B&S Prodige trumpet can therefore boast "100% Made In Buffet Crampon".

TECHNICAL CHARACTERISTICS

Key: Bb

- **Bore:** .460" / 11,68mm
- **Bell:** 484" / 123mm; hand-made in yellow brass
- 3 top sprung monel valves
- **Leadpipe:**
BS210: standard in rose brass
BS210LR: reversed in rose brass
- **Finish:** lacquer or silverplated
- **Case:** Gigbag
- **Mouthpiece:** Icon
