

More expressive and lively sound with great response Bb Trumpet, ML bore (11.65mm;0.459"), allround model, silver plated, with 2-piece bell (123mm; 4-7/8") from YTR-4335GS, parts from YTR-6335S & custom models, mouthpiece 14B4

The up-dated intermediate trumpet YTR-5335G(S) comes with a variety of changes. New valve casing utilizing a new engineering approach provides improved accuracy and durability. The small but important changes of mouthpiece receiver, finger buttons and brace positions offer a more flexible trumpet with "open sound" to be played in a wide variety of music genres. The new generation YTR-5335GSII comes with the popular semi-hard case back pack style as our YTR-4335G model. The hydraulic process that expands the upper part of the one-piece case has been changed to lathe operation for better precision and dimensional stability.
