

GENEVA INSTRUMENTS are proud to present the new world class...

Symphony

EEb TUBA

The first thing that hits you with the New Geneva Symphony is the quality of Sound. Much rounder in comparison to its rival, the intonation is second to none, the 4th valve is free blowing and the compensating system works without being stuffy. The leadpipe is in perfect position and the carriage rings out of the way. The Geneva produces an organ like sound that fits perfectly into any Brass Band to Symphony Orchestra.
