## CONTENDER

Designed as a lightweight and affordable option for light duty marching applications...

The Contender Series features select All Polar shells and includes Remo drumheads. This results in a sound that is pleasantly warm, with plenty of volume and projection. All Contender Series hardware has a simple, time tested design for reliable performance and ease of maintenance. The aluminum alloy lugs are light and strong for stable tuning and dependability of performance.

## ENDEAVOR

Delivering advanced quality for advanced drum lines ...

The Endeavor Series marching drums are ideal for ensembles placing a premium on durability and high performance, yet requiring moderate weight. The one-piece die-cast aluminum lugs are designed to maintain tuning integrity even under the demands of higher tension. The maple/birch shells produce a warm sound with power and presence.

## LWB

Innovative ultralight, yet extremely strong bass drums. Starting at 4,6 kg. Unmatched performance in terms of sound quality and projection.

## XTD

Where precision is requisite and any mistakes are too many, the XTD snare helps bring prestige and intensity to the arc.

XTD tenors get attention. The maple-walnut shells exude power and depth, with tonal clarity that delivers pitch definition all the way to the box.

For maximum projection, clarity and feel the Majestic XTD progressive air venting system helps address the demands of contemporary rudimental bass drumming. The quad-beaded claws and aluminium hoops ensure unsurpassed strength and stability.

## PROPHONIC

Choose your own sound and style...

The Prophonic Marching Drum series: light weight, custom designed, perfectly balanced and durable.

Making use of modern technologies, but with respect to the ancient style of drumming.

- Options to choose from:
- type of shell (wood/aluminium)
  - RAL colour hardware & claws
  - wrap/covering shells
  - drumheads
  - tension rims
  - strainer systems

NEW!!!

## CARRIERS

The Majestic carrier 2.0 is lighter, more in keeping with the body and makes the musician agile. The padding is wider, thicker and replaceable, which greatly benefits to the carrying comfort. Back support belt included.

## CYMBALS

Hand hammered classical & orchestra cymbals. Its rich sound spectrum completes your percussion set-up.

The cymbals are wood 'cooked' (not gas, like others) in a process which involves hammering and lathering in three separate cycles. This results in superior flexibility and linear decay with no unwanted pitch changes and overtones.
