

A brand new design based on the traditional smaller bore size preferred by players around the world.

Features

Brand new design

The YFH-8315GS is a fresh and unique addition to the Yamaha flugelhorn lineup.

New trigger system

The newly designed third valve slide trigger is more ergonomic and will accommodate a wider range of hand sizes.

New leadpipe design

The YFH-8315GS features a newly designed leadpipe, outer leadpipe area and a new connection brace between the leadpipe and the valve casing.

Vertical valve tubing

Traditionally, flugelhorns are made with vertical valve tubing.

Monel pistons

Monel pistons are resistant to corrosion and are an ideal choice for professional flugelhorn pistons which must retain precise fit and smooth action over many years.

Features

Hand-lapped pistons and slides

Hand-lapping pistons and slides ensures an absolutely perfect fit and seal between the pistons and casing or slide parts. Such a perfect fit helps to achieve smooth air flow and smooth action and improve the response and intonation of the instrument.
