## Mouthpieces

- 1 - 2 Mouthpiece Descriptions
- 3 Trumpet
- 4 Cornet
- 5 Flugelhorn
- 6 French Horn
- 7 Tenor Horn
- 8 Mouthpiece Trial Tips
- 9 Trombone
- 10 Bass Trombone
- 11 Baritone
- 12 Euphonium
- 13 Tuba

## Mutes & Accessories

- 14- 15 Mute Descriptions
- 16 Mutes
- 17 Accessories

View our production process in this interview with Denis and Steven Wick.

Eventually, when you're talking about playing, you've got to do something with bits of metal because the human body can't do everything. The human body can adapt to anything but the relationship between the mouthpiece and the instrument you can't change, and so that is the part of the equation you have to get right. And that's what I did. - Denis Wick

## Classic Mouthpieces

Combined with its unique shape, Denis Wick Classic mouthpiece design is focused on balance and compatibility between diameter, rim, and throat measurements, combined with backbore and cup contours. These features combined with cutting edge CNC manufacturing techniques provide the very best intonation, comfort, tonal response and consistency, and make the Classic one of our top selling mouthpieces for over 55 years. Available for all brass instruments..

## Heritage Mouthpieces

The Heritage design uses the same sizing as the Classic series. However, Heritage utilizes additional mass located in the base of the cup for added focus, which is compensated by thinned upper walls and rim. This aids the player in easy articulation in higher registers, and a very colorful tonal response. Available for Tuba, Tenor Horn, Trombone, French Horn (Paxman), Trumpet, and Cornet.

## Ultra Mouthpieces

Originally designed by Steven Mead for the Euphonium, the Ultra mouthpiece is reminiscent of the Alliance shape featuring additional mass compared to the Classic series. Sizing and specifications were designed in collaboration with Steven Mead, Aaron Tindall, and a variety of other Denis Wick artists. Find comfortable rims and design focused on efficiency throughout the Ultra series options. Available for Tuba, Euphonium, Bass Trombone, French Horn, Trumpet, and Cornet.

## American Classic Mouthpiece

The American Classic trumpet mouthpieces were designed to capture the sound and feel of the most popular American trumpet mouthpieces. They have a medium deep bowl-shaped cup perfectly paired with a v-type backbore and an open but projecting throat. Combined with a slightly rounded rim, these features provide an extremely comfortable mouthpiece that has a consistent projecting sound throughout all registers. Available for trumpet in both American Classic and American Classic Ultra.

## Alliance Signature Mouthpieces

Some of the finest musicians in the world today have contributed their expertise to make the Alliance Mouthpiece range ideal for every level of brass playing. Signature Alliance mouthpieces were designed, road-tested, and approved by artists David Childs, Richard Marshall, and Owen Farr. Available for Euphonium, Tenor Horn, and Cornet.

## Alliance Prestige Mouthpieces

Alliance mouthpieces provide the deep warm sounds characteristic to the British Brass Band style. Similar to the Denis Wick Classic sizes, their slightly heavier mass aids in a dark and focused tone. Available for Euphonium, Baritone, Tenor Horn, Trombone, French Horn, Flugelhorn, and Cornet.

## HeavyTop Mouthpiece

Denis Wick HeavyTop mouthpieces are designed to reduce the amount of vibration lost through the mouthpiece. Additional mass around the cup, throat and backbore of the mouthpiece transfers energy much more efficiently, resulting in improved projection and stability and creating a strong, rich, and centered sound. Available for Trombone and Trumpet.

### MOUTHPIECE KEY

1. **Cup Diameter:** Notated in mm
2. **Rim Width:** Notated in mm
3. **Cup Contour:** A (deep), No letter (slightly deep)
4. **Throat:** Notated in mm
5. **Backbore:** Open (free blowing), V-type (projecting)

# Tips for Finding & Testing Your Next Mouthpiece

Whether you are looking for your first or your next mouthpiece, visit [deniswick.com](https://deniswick.com) Student Resources to find our suggested sizes for beginner and step-up mouthpieces. If you are not a beginner, follow the advice below to find the best option for your next mouthpiece.

- Before you start: Determine your optimal diameter and find 2-3 mouthpieces within that diameter to compare. Choose a double octave scale that is comfortable for you to play, and a small section (8-16 bars) of music which will be used for testing each mouthpiece. Also, get your metronome ready, you'll need it!
- Always begin your mouthpiece trial with the question: *What is the best sound I have ever heard – the one I want to sound like?* Make sure to take notes on each mouthpiece you try as you go through the steps below.

## Set your metronome to 85 and keep it running Steps 1-3

1. Test for tone: Using your tuning note, play a whole note on each mouthpiece. Which had a better sound?
2. Test Articulation: Staying on your tuning note, play 4 quarter notes followed by 4 8th notes. Play this exercise 2 times: legato and staccato. Which mouthpiece provided better sound response and clarity?
3. Range: Play your double octave scale 3 times: Staccato, legato, and slur. Listen for which mouthpiece maintained the best sound and response from the bottom to top of the scale.
4. Musicality: Use your 8-16 bar section of an etude or song you like and play this section on each mouthpiece. Set your metronome to an appropriate temp for this section so that you make sure each trial is played in the same tempo. Which mouthpiece sounded the best with the least effort?

The winning option will be the mouthpiece that naturally produces your best sound without having to physically adjust anything. Your last task is to try the winner against your current mouthpiece and make sure it still passes the test.

“ When it comes to mouthpieces, mass, shape, size, and materials are like the primary colors of an artist's palette. We utilize the variety of these components in our designs, and the result is a diversity of beautiful tonal colors that range from warm & atmospheric to brilliant & projecting.

Mary Galime  
Denis Wick Products

- 4. Throat:** Notated in mm
- 5. Shank/Backbore:** L (standard), U(standard\*), Y (standard\*)  
Backbore: Open/Barrel (free blowing), V-Type (projecting)

### Aluminum Straight Mutes

All of our aluminum mutes are hand-made using high quality aluminum. Unlike pressed aluminum, our hand spinning process creates a higher density aluminum that is extra responsive and provides our straight mutes with their signature sound. Precision design ensures quality intonation and helps increase projection. Denis Wick mutes use the finest all-natural cork that is durable enough to last for years, and ensures a tight and secure fit inside the bell. While aluminum straight mutes are available for all brass instruments, select options have been designed with brass or copper bottoms, and our new pure-coat red finish.

### Adjustable Cup Mutes

Designed with a free moving cup, the Denis Wick Adjustable Cup mute allows a player to customize the distance of the cup from the instrument bell. This level of adjustment can be used to create a myriad of different tone colors and makes this mute customizable to any size bell. Available for Bass Trombone, Trombone, and Bb, C, D, or Eb Trumpet/Cornet.

### Extending Tube Mute

The Denis Wick extending tube mute is designed to provide a classic "wah-wah" jazz sound. The inner tube, or stem, has been lengthened to ensure quality intonation, and manufactured using brass to provide better grip inside the aluminum mute. Available for Bass /Tenor Trombone, and Trumpet/Cornet.

### Practice Mute

Through careful design, Wick has created a practice mute that effectively reduces sound while retaining a stable pitch, accurate intonation and the ideal level of resistance. Whether being used in teaching or practicing, Wick practice mutes can improve tone and bring the sound to the edge of silence. Available for all brass instruments.

### Synthetic Mute

The Denis Wick synthetic mutes offer a high-quality mute option at a low cost, perfect for students to professionals. Crafted from impact resistant material and the highest quality cork, the Denis Wick synthetic straight and cup mutes provide the same high level of tuning, response, and tone found in our aluminum options. Available for Trumpet and Trombone.

## Wooden Mutes

Wooden mutes are used for their warm straight mute sound but can often be expensive and easy to break. Denis Wick wooden mutes are made by wrapping a birch veneer facing over a vulcanized fiber and finished with a marine ply bottom. This manufacturing technique increases durability while at the same time maintains the beautifully warm muted sound that can only be achieved with a real wooden mute. Available for most brass instruments.

## Travel Mutes

The Denis Wick travel mute was designed with portability in mind. All our travel mutes fit inside, not extending beyond the bell of the instrument. This allows the mute and the instrument to fit in the case without taking up any extra room. Couple portability with its excellent response and intonation and practicing on the go has never been easier. Available for Euphonium, Baritone, Bass & Tenor Trombone.

## Stopping Mute

The Denis Wick stopping mute provides a perfect semi-tone transposition every time. It is made from hand-spun aluminum and uses the best all-natural cork available. For times when using your hand just won't work, the consistency and quality of the Wick stopping mute is the perfect alternative. For French Horn.

## Pianissimo Mute

Made from high purity spun aluminum, these handmade mutes provide a great feel which doesn't affect the resistance of the instrument, and the ability to produce a searing fortissimo as well as controlled pianissimo. Denis Wick offers the most comprehensive line of straight mutes available. For Bb Trumpet/Cornet.

## Plunger Mute

The Denis Wick plunger mute is made of hand-spun aluminum and designed to be extra deep. The extra depth creates a more dramatic "wah" effect and used for jazz and modern composition music. Available for Trombone, and Trumpet/Cornet.
